引言

变质量力学系统的研究不仅具有重要的理论价值, 而且具有明显的实际意义。许多系统, 例如运动中的太空船、导弹、喷气式飞机、火箭、燃油汽车等, 都是变质量系统。变质量系统的研究已取得很大进步^[1~6]。本文研究具有双面理想完整约束的变质量系统的机械能守恒律。首先, 利用系统的运动微分方程, 建立能量变化方程, 得到守恒律存在的充分必要条件。然后, 提出具有守恒律的 27 种情形。最后, 举例说明。

1 系统的能量变化方程

考虑由 N 个质点组成的力学系统。在瞬时 t , 第 i 个质点的质量为 m_i ($i=1, \dots, N$) ; 在瞬时 $t+dt$, 由质点分离(或并入)的微粒的质量为 $d m_i$ 。设系统的位形由 n 个广义坐标 q_s ($s=1, \dots, n$) 确定, 并设

$$m_i = m_i(t, q), (i=1, \dots, N) \quad (1)$$

则系统的运动微分方程可写成如下形式^[9]

$$\frac{d}{dt} \frac{\partial L}{\partial \dot{q}_i} - \frac{\partial L}{\partial q_i} = Q_i + P_i, (s=1, \dots, n) \quad (2)$$

其中 $L=T-V$ 是系统的 Lagrange 函数, $V=V(t, q)$ 为势能, $T=T_2+T_1+T_0$ 为动能, 这里

$$T_2 = \frac{1}{2} m_i(t, q) \frac{\partial r_i}{\partial q_i} \cdot \frac{\partial r_i}{\partial q_i} \dot{q}_i \dot{q}_k \quad (3)$$

$$T_1 = m_i(t, q) \frac{\partial r_i}{\partial q_i} \cdot \frac{\partial r_i}{\partial t} \dot{q}_i \quad (4)$$

$$T_0 = \frac{1}{2} m_i(t, q) \frac{\partial r_i}{\partial t} \cdot \frac{\partial r_i}{\partial t} \quad (5)$$

Q_i 为广义非势力, P_i 为广义反推力^[9]

$$P_i = (R_i + m_i \dot{r}_i) \cdot \frac{\partial r_i}{\partial q_i} - \frac{1}{2} \dot{r}_i \cdot \dot{r}_i \frac{\partial m_i}{\partial q_i} \quad (6)$$

而

$$R_i = m_i u_i \quad (7)$$

其中 u_i 是微粒相对第 i 个质点的速度。用 \dot{q}_i 乘方程(2)并且对 s 求和, 得

$$\frac{d}{dt} \left[\frac{\partial L}{\partial \dot{q}_i} \dot{q}_i - L \right] + \frac{\partial L}{\partial t} = Q_i \dot{q}_i + P_i \dot{q}_i \quad (8)$$

即

$$\dot{T}_2 - \dot{T}_0 + \dot{V} + \frac{\partial L}{\partial t} = Q_i \dot{q}_i + P_i \dot{q}_i \quad (9)$$

方程(9)称为系统的能量变化方程。

2 机械能守恒律存在的充分必要条件

假设系统(2)存在机械能守恒律

$$T + V = h = \text{const.} \quad (10)$$

于是, 有

$$\dot{T} + \dot{V} |_{(2)} = 0 \quad (11)$$

从方程(9) 和(11) 得到如下条件

$$-2\dot{T}_0 - \dot{T}_1 + \frac{\partial L}{\partial t} = Q_i \dot{q}_i + P_i \dot{q}_i \quad (12)$$

反之, 若条件(12) 成立, 则从该条件和方程(9) 可得方程(11)。因此, 该条件是系统存在机械能守恒律的充分必要条件。

例 1 设

$$T = \frac{1}{2}m(q)\dot{q}^2, V = \frac{1}{2}m(q)q^2$$

则系统存在机械能守恒律.

例 2 设

$$T = \frac{1}{2}m(\dot{q}_1^2 + \dot{q}_2^2) + ma(\dot{q}_1 + \dot{q}_2) + ma^2,$$

$$a = \text{const.}, V = \text{const.}, m = m_0 q_1$$

取

$$Q_1 = Q_2 = 0, P_1 \dot{q}_1 + P_2 \dot{q}_2 = 0$$

$$P_1 = m_0 \dot{q}_1(u_1 + \dot{q}_1 + a) -$$

$$\frac{1}{2}m_0 \left[\frac{1}{2}(\dot{q}_1^2 + \dot{q}_2^2) + a(\dot{q}_1 + \dot{q}_2) + a^2 \right]$$

$$P_2 = m_0 \dot{q}_2(u_2 + \dot{q}_2 + a)$$

$$T = \frac{1}{2}m[\dot{q}_1^2 + \dot{q}_2^2 + 2a(\dot{q}_2 q_1 - \dot{q}_1 q_2) + a^2(\dot{q}_1^2 + \dot{q}_2^2)]$$

$$V = \text{const.}, m = m_0(\dot{q}_1^2 + \dot{q}_2^2)^{-1}$$

若广义力和广义反推力满足如下关系

$$\frac{Q_1 + P_1}{Q_2 + P_2} = \frac{a q_1 + \dot{q}_2}{a q_2 - \dot{q}_1}$$

则系统存在机械能守恒律.

例 4 设

$$T = \frac{1}{2}m(\dot{q}_1^2 + \dot{q}_2^2) + ma(\dot{q}_1 + \dot{q}_2) + ma^2,$$

$$V = \text{const.}, m = m(t)$$

若广义力 Q_1, Q_2 满足关系

$$Q_1(\dot{q}_1 + a) + Q_2(\dot{q}_2 + a) =$$

$$\frac{\partial m}{\partial t} \left[\frac{1}{2}(\dot{q}_1^2 + \dot{q}_2^2) + a(\dot{q}_1 + \dot{q}_2) + a^2 \right]$$

则系统存在机械能守恒律.

例 5 设

$$T = \frac{1}{2}m(\dot{q}^2 + 2a\dot{q} + a^2),$$

$$V = \text{const.}, m = m(t)$$

若广义力和广义反推力满足关系

$$(Q + P)(\dot{q} + a) = \frac{1}{2}\dot{m}(\dot{q}^2 + 2a\dot{q} + a^2)$$

则系统存在机械能守恒律.

Abstract The conservation law of mechanical energy in variable mass mechanical systems with ideal bilateral holonomic constraints is studied. First, by using the differential equations of the motion of the systems, the equation of energy variation is obtained, and the sufficient and necessary condition under which the conservation law of mechanical energy exists is given. Then, the 27 cases possessing the conservation law are presented. At last, some examples are given to illustrate the application of the result.

Key words ideal bilateral holonomic constraint, variable mass mechanical system, equation of energy variation, conservation law of mechanical energy
